

These images of the Laser Interferometer Space Antenna (LISA) probes are formatted to fit on CD labels. Print them out and attach them to a CD to use in Space Time Telescopes demonstration #6, gravitational waves.

You can turn these CDs into medallions for your volunteers by fastening a plastic binder clip to the CD's edge and running a length of string through the metal tabs used to open the clip. Tie the two ends of the string together and you've got yourself a wearable LISA craft!
